3. Work Flow for Task 1	3

1. Objective & Scope

This is a Web Application which hold the individual information of workers and access to each individual personal records/project records/work done/ work completed by individuals. Project will be made in Php/Laravel framework and default bootstrap Css framework.

2. Project Overview

The Application will have multiple tiers, the following are the most important part of the application:-

2.1 Admin Panel / Super Admin

1. Complete control of the application.
2. Add new workers.
3. Delete workers.
4. Update workers.
5. View progress of workers.

2.2 Workers End

1. Login.
2. View individual progress.

3. Work Flow For Task 1

1. Install Laravel

*For Reference: <https://laravel.com/docs/4.2>
(Contact your supervisor for more information)*

2. Use Default Bootstrap framework.

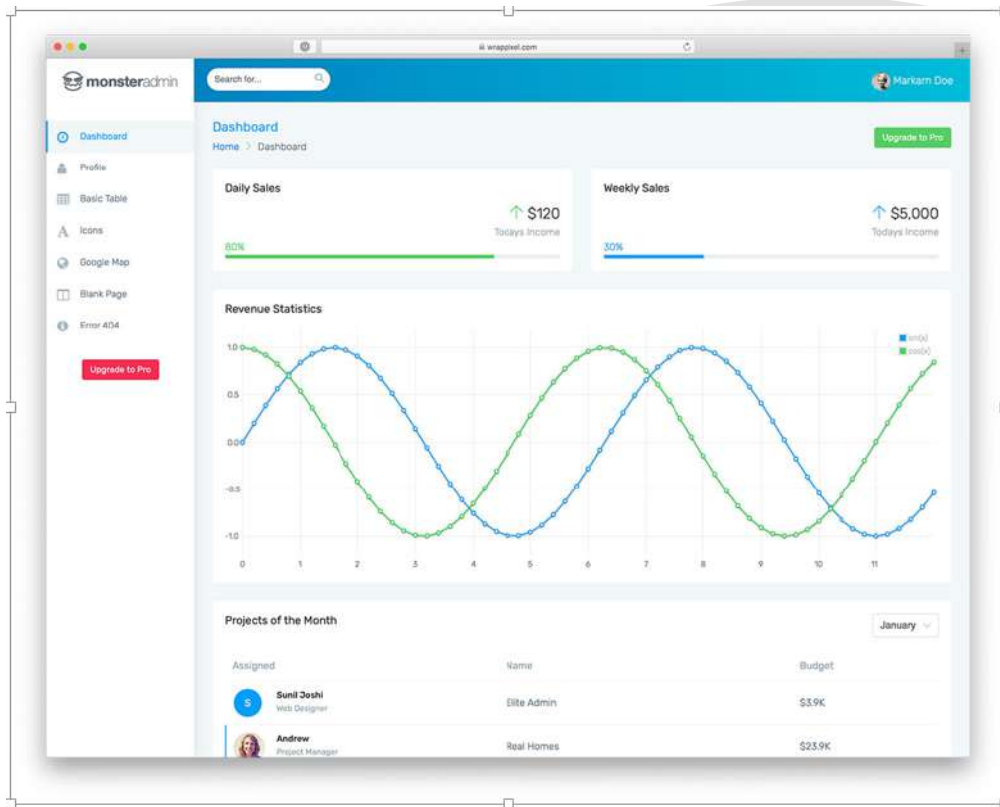

For Reference: <https://laracasts.com/discuss/channels/laravel/how-to-integrate-bootstrap-with-laravel?page=1>

(Contact your supervisor for more information)

3. Design a simple login form:
 - Email textbox
 - Password textbox
 - Perform proper validation
 - Make a super-admin only who can access the Admin-side dashboard.
 - Make eight individual users who can access the Worker-side panel.

4. Design Admin-side Front-end of the web application with directions from your supervisor.

For Reference:

- Admin-Site Dashboard should only be accessible by the super admin. Perform proper validation.
- Worker side panel should be a welcome screen with user-name been displayed for now.
- Perform proper validation an individual account cannot access the Admin-panel.
